

Abengoa restarts activities in Spain after being awarded three new transmission and distribution projects

- The projects will be undertaken for the Department of the United States Air Force in Morón de la Frontera (Seville), and for the Spanish Energy Grid (REE) in Las Palmas de Gran Canaria and Lugo.

January 18, 2017 – Abengoa (MCE: ABG.B), the international company that applies innovative technology solutions for sustainability in the energy and environment sectors, has been awarded three new electricity transmission and distribution projects in Spain. The first of these projects will be undertaken for the Department of the United States Air Force in Morón de la Frontera (Seville), while the other two will be performed in Las Palmas de Gran Canaria and Lugo for the Spanish Energy Grid (REE).

With regard to the project awarded by the military base in Morón de la Frontera, Abengoa will be responsible for the repairs to be made to the feeder, the laying of underground lines and the replacement of the present transformers and isolating switches. The project has a 22-month execution period.

For the Spanish Energy Grid, the company will be in charge of the civil works and the extension of the 66kV Aldea Blanca electrical substation, as well as one in San Bartolomé de Tiraja, in Las Palmas de Gran Canaria. In addition, the project will include the urbanizing of the exterior areas to make way for a high voltage line.

Finally, Abengoa will also carry out various improvements to a 220 kV high voltage line for the same client. The line is located in the Lugo region, close to the town of Monterroso. These works will have a seven-month duration and are scheduled to start next spring.

These projects mark the restarting of Abengoa's activities in Spain in the transmission sector, which is where Abengoa has developed over 27,000 km of lines around the world and constructed over 330 substations in the last 15 years.

About Abengoa
