

## Abengoa participates in the Energy and Mines World Congress

- The Energy and Mines World Congress, held in Toronto, Canada on Dec 2-4, 2019, brings together mining and renewable energy sectors to drive solutions for affordable, reliable and sustainable power for mines.
- Abengoa shares its experience as a key player in this sector, such as in the development of hybrid power generation solutions with energy storage, adapted to the requirements of its clients.

December 3, 2019 - Abengoa (MCE: ABG/P:SM), the international company that applies innovative technology solutions for sustainability in the infrastructure, energy and water sectors, participates this week in one of the largest congresses in the world dedicated to the mining and energy sector. This is the 7<sup>th</sup> edition of the Energy and Mines World Congress, in which the main players in the sector meet to address the transition to sustainable energy in the mining industry.

Abengoa, which participates in the congress in the exhibitors' category, shared among the attendees its wide experience in the hybridization of power plants that provide clean and dispatchable energy and that make the company to be recognized worldwide for its development of reliable and affordable decarbonization solutions both for the mining sector and industrial facilities and for isolated grids. Specifically, the company has more than 12 GW of power plants – both renewable and conventional – successfully installed. Its experience in all kinds of solutions provides Abengoa with a high capacity of design and hybridization among power generation technologies that allows it to offer the optimal solution to its clients and this is how Abengoa is exposing it these days in Toronto.

Besides this, it has its proprietary modeling and optimization tool, Abengoa Energy Management System (AEMS), which also allows the company to define the optimal solution based on its experience across this broad range of technologies.

In addition to deploying a wide range of commercial technologies now in operation, Abengoa is currently developing advanced clean energy solutions for decarbonization such as hydrogen technologies and industrial solar process heat.
