ABENGOA

Innovative technology solutions for sustainability

Abengoa participates in the 'Sustainable Light' program in Mexico

- The campaign promotes the use of low-energy bulbs.

Seville, December 27, 2012. Abengoa, the international company that applies innovative technology solutions for sustainable development in the energy and environment sectors, has participated in the 2nd edition of the 'Sustainable Light' campaign. The initiative is sponsored by FIDE, the energy savings trust, which seeks to promote energy savings in Mexican households through the use of efficient bulbs that benefit the environment and consumers.

Abengoa's facilities in Mexico were used as an exchange center to swap incandescent bulbs for low-energy bulbs. The Mexican government estimates that each 100 W bulb that is replaced with a 23 W bulb saves up to 77% of the energy consumed.

This second edition ended with nearly 23 million bulbs being replaced.

About Abengoa

Abengoa (MCE: ABG) is an international company that applies innovative technology solutions for sustainable development in the energy and environment sectors, generating electricity from the sun, producing biofuels, desalinating sea water and recycling industrial waste. (www.abengoa.com)
