

The walkway that connects Los Bermejales with Campus Palmas Altas prevents the emission of 150 kg of CO₂ every day

- The pedestrian walkway over the SE-30 highway makes sustainable transport, like cycling, easier to use.
- It was constructed by Abengoa and subsequently donated to city.

October 15, 2014 – Abengoa (MCE: ABG.B/P SM /NASDAQ: ABGB), the international company that applies innovative technology solutions for sustainability in the energy and environment sectors, promotes the use of sustainable transport every day through various measures that it has implemented. These initiatives include a pedestrian walkway that Abengoa constructed in 2012 to link the Los Bermejales and Bellavista districts with Campus Palmas Altas.

This walkway manages to prevent the emission of 150 kg of CO₂ every day by promoting the use of sustainable transport. It enables the residents of Seville and Abengoa's nearly 3,000 employees to access Campus Palmas Altas via bicycle or on foot, avoiding the use of private vehicles.

The walkway, like the company's corporate headquarters, was designed by the prestigious architect Richard Rogers and the Spanish architecture firm Vidal y Asociados Arquitectos. It consists of a large bridge that is 80 meters long and 3.20 meters wide over the SE-30 highway. The project combines high quality materials with an innovative design and is protected by a steel wire mesh.

The walkway allows both pedestrians and cyclists to cross the SE-30 in safety, while also promoting sustainable mobility. It has also been specifically designed for people with reduced mobility.

The walkway not only benefits people that travel to Campus Palmas Altas every day, but all of Seville's residents since after it was constructed, Abengoa donated it to the city.

Abengoa is also building a road to improve access by public buses to the Campus Palmas Altas area so that the company's headquarters become an integrated part of the city structure, connected to the city's bus network.

ABENGOA

Innovative technology solutions for **sustainability**

About Abengoa

Abengoa (MCE: ABG.B/P SM /NASDAQ: ABGB) applies innovative technology solutions for sustainability in the energy and environment sectors, generating electricity from renewable resources, converting biomass into biofuels and producing drinking water from sea water. (www.abengoa.com)
