

## Abengoa takes part in the Pegasus project

- Funded by the European Union within the first call for the Interreg MED programme, the project aims to energize the introduction of Microgrids

November 10, 2017 – Abengoa (MCE: ABG/P:SM), the international company that applies innovative technology solutions for sustainability in the infrastructures, energy and water sectors, takes part in the european Pegasus project, included in the first call for the Interreg MED programme, co-financed by the ERDF funds and the Ministry of Finance and Civil Service.

In particular, it is a collaborative project, with the consortium formed by energy agencies, local public authorities, SMEs, large companies, research centres and universities from nine countries in the Mediterranean area. This consortium was created with the idea of acquiring, testing and transferring the experience of the project in a complete package of tools for the local public sector in the mediterranean area, from conceptualization to financial promotion. This involves all stakeholders, including end-users and companies, to achieve the program objective: to jointly increase the production of the RES (Renewable Energy sources) in the territories involved.

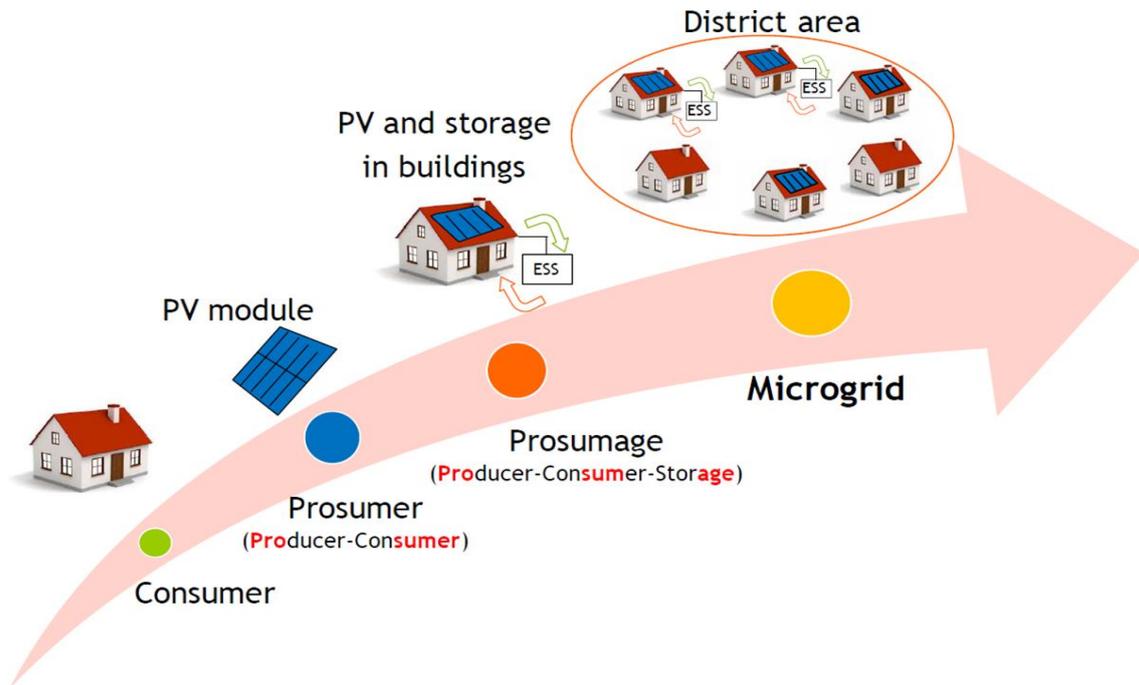

Pegasus intends to energize the introduction of micro-grids. In addition, it contributes to strengthen the capacity of the partners in order to optimize the production and the energy consumption, establishing, for it, operational measures for the operation of the microgrids. The innovative approach of the project is the analysis of the operation of seven microgrids in seven pilot areas together, whose solutions will be based on real data obtained in each specific situation.

The Pegasus project, 30 months in length and a total budget of 1.9 M €, aims to demonstrate the viability of microgrids by acting on technical or administrative barriers that hinder the use of microgrids in disadvantaged areas, improving the presence of the RES, the efficiency of the consumption of these and the quality of the energy supply.
