

The Abengoa group, recognized by Engineering News-Record as a leader in water treatment, desalination, solar energy and cogeneration

- The company, through its verticals, occupies some of the most important positions in the ranking of the main international construction companies published by Engineering News-Record (ENR) magazine.

December 30th, 2020 – Abengoa, the international company that applies innovative technology solutions for sustainability in the infrastructure, energy and water sectors, has been recognized, through its verticals, for its leadership in the Top International Contractor 2020 ranking, elaborated and published annually by the prestigious Engineering News-Record (ENR) magazine.

The company holds the first position in the development of water treatment and desalination projects, as well as the third and fourth place in cogeneration and solar energy, respectively.

It is also present in other categories such as the correctional sector (fourth position), operation and maintenance (sixth position), transmission and distribution (tenth), power (eleventh), water supply (fourteenth) and health care (twenty-second).

On the other hand, the group is also ranked number 64 in the Top 250 International Contractors ranking, published by ENR in August 2020, which includes the top 250 international contractors.

ENR is considered a benchmark platform in the construction sector, which provides information, news and analysis, through its magazine and its website. ENR rankings are based on the previous year's income at home and abroad of participating contractors.

With this new recognition, the company consolidates its position as an international leader in the development of water and energy projects, where it already has several awards granted by specialized institutions in the water sector, such as the Global Water Intelligence and the International Desalination Association, or energy, like CSP Plaza.
